Python Programming Lab

Experiment 1: Python Installation and starting with python

1. Install Python and understand difference between scripting and interactive modes in IDLE.

In [7]:
```
#Scripting Mode: Write Python code in a .py file, then run the full program at on
name = "Shreyansh"
print("Hello", name)
```

```
Hello Shreyansh
```

In [8]:
```
#Interactive Mode: Have to type Python commands one by one, and Python gives the
5 + 2
7
name = "Shreyansh"
name
'Shreyansh'
```

Out[8]:
```
'Shreyansh'
```

2. Write Python programs to print strings in the given manner:
   a) Hello Everyone !!!
   b) Hello
   World
   c) Hello
   World
   d) ‘ Rohit’ s date of birth is 12\05\1999’

In [23]:
```
print("Hello Everyone")
```

```
Hello Everyone
```

In [21]:
```
print("Hello\nWorld")
```

```
Hello
World
```

In [22]:
```
print("Hello \n   World")
```

```
Hello
   World
```

In [25]:
```
print("Shreyansh's date of birth is 12\\05\\1999")
```

```
Shreyansh's date of birth is 12\05\1999
```

3. Declare a string variable called x and assign it the value “Hello”.

Print out the value of x

In [24]:
```
x = "Hello"
print(x)
```

```
Hello
```

4. Take different data types and print values using print function.

In [28]:
```
name = "Shreyansh"
age = 23
height = 5.8
is_student = True
marks = [90, 85, 88]

print("Name:", name)
print("Age:", age)
print("Height:", height)
print("Is Student:", is_student)
print("Marks:", marks)
```

```
Name: Shreyansh
Age: 23
Height: 5.8
Is Student: True
Marks: [90, 85, 88]
```

5. Take two variables, a and b. Assign your first name and last name. Print your Name after adding your First name and Last name together.

In [34]:
```
F = "Shreyansh"
L = " Gupta"
print(F + L)
```

```
Shreyansh Gupta
```

6. Declare three variables, consisting of your first name, your last name and Nickname. Write a program that prints out your first name, then your nickname in parenthesis and then your last name.
Example output: George (woody) Washington.

In [35]:
```
F = "Shreyansh"
L = " Gupta"
n = "Ansh"
print(F + L)
print(n)
```

```
Shreyansh Gupta
Ansh
```

7. Declare and assign values to suitable variables and print in the following way:

NAME: SHREYANSH GUPTA
SAP ID: 590020790 DATE OF BIRTH: 15 Dec 2002
ADDRESS: UPES

Bidholi Campus

Pincode: 248007

Programme: AI&ML

Semester: 2

In [36]:

```
name = "SHREYANSH GUPTA"
sap_id = 590020790
dob = "15 Dec 2002"
address1 = "UPES"
address2 = "Bidholi Campus"
pincode = 248007
Course = "BCA"
semester = 2

print("NAME:", name)
print("SAP ID:", sap_id)
print("DATE OF BIRTH:", dob)
print("ADDRESS:", address1)
print(address2)
print("Pincode:", pincode)
print("Course:", Course)
print("Semester:", semester)
```

```
NAME: SHREYANSH GUPTA
SAP ID: 590020790
DATE OF BIRTH: 15 Dec 2002
```
